Tips & Tricks

By using higher Volume and lower Gain settings, the TIGHT DRIVE works more like a clean booster. Try EQ on normal, Tight set to Fat, and Tone straight up.

For the most mid-boost, set the EQ to Smooth & Tight switch to Tight.

The Plexi EQ setting cuts mids and extends the highs. For more bass, try turning the Tone down and Volume up.

For a cool, dark "violin" tone, turn the Tone fully down, EQ smooth, and Tight to Fat. Crank the gain.

By using very low gain/volume settings, the Tight Drive can convert your amp's lead channel to a crunch rhythm tone.
